2020

> *Every pollutant has an Ayurvedic counter-measure — and most of them are free. This compilation maps daily routine against modern environmental hazards.*

Abstract

This supervised compilation examines the role of Dinacharya — the classical daily regimen — in preventing the health hazards posed by pollution, in the Department of Swasthavritta, Parul Institute of Ayurveda, Parul University. The work surveys the classical framework of Ahara (diet), Vihara (behaviour) and their rules of combination, place, time, quantity and quality, and then maps each of the major contemporary pollution categories — air, water, soil, noise, light, thermal and radioactive — against the specific protective and remedial measures that Dinacharya prescribes. Because classical texts address pollution-related illness as an accumulation of doshas disturbed by specific etiological factors, the compilation argues that preventive daily routine is a more realistic first line of defence than any downstream treatment, particularly in communities where environmental exposure cannot be immediately controlled. The work concludes that a structured, seasonally appropriate daily routine remains a clinically meaningful and accessible intervention for pollution-related morbidity.

Role of Dinacharya in the prevention of health hazards of pollution

❖ Definition of pollution:-

Pollution is defined as the presence of impurities or pollutant substances in sufficient concentration levels, causing harmful effects on human beings, animals, plant life or material resources when exposed for a sufficient duration of time, thus reducing the quality of life in the environment.

❖ Types of pollution:-

❖ Sources and health hazards of different types of pollution:-

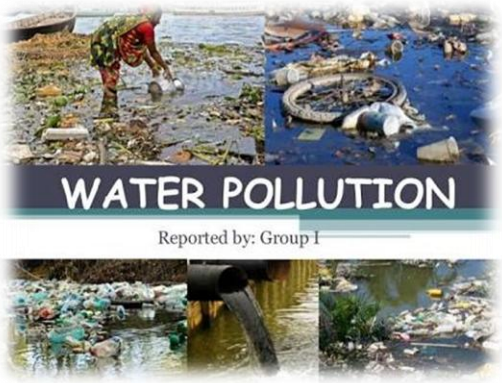

- Air pollution:-
  - ✓ The pollution is caused by the various components that present in the environment.
  - ✓ It is caused by dust or excessive gases like carbon dioxide or other vapors that can't be effectively removed through natural cycles.

Health hazards:-

- ✓ Ischemic heart disease
- ✓ Stroke
- ✓ Chronic obstruction pulmonary disease (COPD)
- ✓ Lung cancer
- ✓ Acute lower respiratory infections in children
- ✓ Coronary artery disease
- ✓ Asthma
- ✓ Bronchitis

- Water pollution:-
  - ✓ It is caused by contaminated water by improper waste disposal and littering
  - ✓ Organic material decay in water supplies
  - ✓ Increased sediment from soil erosion etc.

Health hazards:-

- ✓ Decreasing the quantity of drinkable water available

- ✓ Lowering water supplies for crop irrigation
- ✓ GIT disorders
- ✓ Acidity caused by industrial discharge in water
- ✓ Skin diseases when bathing in polluted water because of various chemicals.
- ✓ Teeth disorders

- Soil pollution/Land pollution:-
  - ✓ This pollution is caused by hazardous waste and sewage spills.
  - ✓ Non-sustainable farming practices

- ✓ Deforestation
- ✓ Strip mining
- ✓ Household dumping and littering

Health hazards:-

- ✓ It can lead to poor growth and reduced crop yields

  - ✓ Loss of wild -life habitat
  - ✓ Contaminated lands can cause problems in human respiratory system.

- Noise pollution:-
  - ✓ It is caused by human activity that disrupts the standard of living in the affected area.
  - ✓ It comes from, Traffic, Airports, and Railroads, Manufacturing plants, Construction or demolition.

Health hazards:-

- ✓ Hearing loss (Deafness)
- ✓ Wildlife disturbances
- ✓ Headache
- ✓ Hypertension
- ✓ Annoyance
- ✓ Sleep disturbance
- ✓ Ischemic heart disease

- Radioactive pollution:-
  - ✓ This pollution is rare but caused by Nuclear power plant accidents or leakage.
  - ✓ Improper nuclear waste disposal

Health hazards:-

- ✓ Birth defects
- ✓ Cancer
- ✓ Sterilization
- ✓ Also cause water and air pollution

- Thermal pollution:-
  - ✓ It is caused by power plants
  - ✓ Deforestation
  - ✓ Air pollution particulates that trap heat

Health hazards:-

- ✓ Temperature is increase so that skin burning is observed.
- ✓ Dehydration
- ✓ Temperature regulation of body is improper.

- Light pollution:-

  - ✓ Light pollution is caused by large cities where over illumination is found.
  - ✓ Night time sporting events and other night time entertainment.

Health hazards:-

- ✓ Eye sore
- ✓ Eye disorders
- ✓ Headache
- ✓ Extra straining of eyes if light improper
- ✓ Blindness may also occur.

- Personal pollution:-
  - ✓ It means contamination of one's body and lifestyle.

  - ✓ It is caused by excessive smoking, drinking or drug abuse.
  - ✓ Poor personal attitudes

Health hazards:-

- ✓ Liver disorders
- ✓ Heart disease
- ✓ Fatigue
- ✓ Mood irritability

स्नान

- **ब्राह्म मुहूर्त:-**
  - It is the first step of Dinacharya.
  - It means getting up in the morning.

- The healthy person should wake up from the bed in the ब्राह्म मुहूर्त means around 48 to 96 minutes before the sunrise.

Role in prevention of pollution:-

- It plays an important role in prevention from health hazards of pollution.
- In early morning the atmosphere is very clear as well as fresh and more utility of oxygen is possible.
- Melatonin hormone (mood elevator) is produced much in early morning.
- It work as powerful antioxidant, fight against the disease so as to be helpful in preventing the health hazards of pollution.
- During 3 to 6 AM earth vibration is less so mind works effectively throughout the day.
- So some pollution hazards like mood irritability or mental disturbances are prevented by this.

- **उष् पान:- (भाव प्रकाश)**
  - It means drinking lukewarm water.
  - Drinks 8 प्रसृति (768 ml) of water at the time of early sunrise shall live for a 100 years and more free from diseases and old age.
  - If person drinks water in early morning then he/she can not suffer from gastric disorders.

Role in prevention of pollution:-

- Some pollution hazards like Acidity, Indigestion, Piles, Dysentery, constipation and diarrhoea are produced from water pollution and also soil pollution.
- So it prevents all these diseases because if we drink the lukewarm water the bacteria which are present in water are killed by this procedure.

- So it is important for the prevention of hazards of water and land pollution.

- **<u>मल त्याग (शौच विधि):-</u>**

- One should excrete the urine and feces only after getting the urge.
- One should not excrete the stool and urine on roads, outside area, near the river.
- Because if we excrete outside then the land pollution occurs.

<u>Role in prevention of pollution:-</u>

- Hazards of land pollution like reducing crop yields can lead to poor growth so by following this rule we can prevent these.
- Land pollution also leads to respiratory disturbances so if we clean our land then we can prevent the health hazards.
- Water pollution is also occurs by passing out the excreta near the river.
- One should excrete the excreta without diverting attention on other things, silently so the GIT problems are not occurred.
- So for prevention of pollution we should follow the rule of मल त्याग.

- **<u>दन्तधावन:-</u>**
  - One should clean one's teeth two times, one in morning and other at night after intake of food.

Role in prevention of pollution:-

- Some time in water the excess fluoride is present and by using this water the teeth is affected.
- Excess amount of fluoride leads to Fluorosis.
- Less amount of fluoride is present in water lead to dental caries.
- So दन्तधावन by the twigs of some ayurvedic medicine like अर्क, वट, खदिर, करञ्ज and अर्जुन is very beneficial for these diseases of teeth by water pollution.
- The ayurvedic tooth powder which contains कषाय, मधुर, कटु, तिक्त taste removes the bad smell, removes sliminess from the mouth.
- So one should do cleaning of teeth daily.

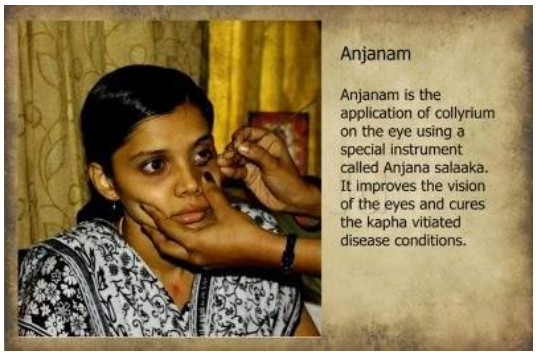

- **जिह्वा निर्लेखन:-**
- Tongue cleaning should be done daily.

Role in prevention of pollution:-

- If water pollution occurs then it prevents the Anorexia and Indigestion.
- Because it stimulates taste perception, increase salivation and get proper digestion.

- **अञ्जन:-**
- Collyrium to the eyes is good for eyes, so it should be used daily.
- By this eyes become beautiful and capable of seeing minute things even.

Role in prevention of pollution:-

- The effects of light pollution like eye strain, eye sore, blindness are prevented by this procedure.
- It clear the vision, gives lightness, no excessive lacrymation, purity of eyes.
- So it prevents the hazards of light pollution.

- **नस्य:-**

- नस्य is very important procedure and it is beneficial for जत्रूर्ध्व विकार.
- The नस्य should be performed daily with अणु तैल.
- 2 to 3 drops of तैल is administered into each nostrils daily is called प्रतिमर्श नस्य.
- नस्य is to be done in different time according to different activities.
- The नस्य can be performed with कटु तैल also according to भावप्रकाश.

Role in prevention of pollution:-

- It removes the dirt from the nasal passage which is accumulated in passage by air pollution.
- It prevents the light pollution by the action of clear vision.
- It prevents Headache which is produced by noise pollution.
- It prevents the hair falling and graying which is produced by Air pollution.
- The physiological action of nasya dravya gets carried through the olfactory nerve endings followed by cilia and cilia stimulate by lipid products.

- So the नस्य is beneficial for the diseases produced above the clavicle.

- **<u>गण्डूष and कवल:-</u>**
- These both are different.

- Mouth is completely filled with गण्डूष द्रव्य and kept without movement is called गण्डूष.
- The liquid should be kept in mouth till the discharge from nasal passage and eyes.
- The द्रव्य used moves easily in mouth called as कवल.

Role in prevention of pollution:-

- It removes the eye disorders.
- It prevents bad smell from the mouth, strengthens the teeth and promotes lightness in the mouth.
- It removes the bacteria from the mouth which is produced by the water pollution and prevent the disease like mouth ulcers, dental caries etc.

- **<u>तांबुल सेवन:-</u>**
- It is also one of the दिनचर्या procedure.
- In this the tender leaves of तांबुल (betel leaves) along with जाति, लवङ्ग, कर्पूर, कन्कोल and कटुक is to be used.

Role in prevention of pollution:-

- It is very good for heart so it prevents heart diseases like Ischemic heart disease, coronary heart disease which is caused by Air pollution and Noise pollution etc.
- It also removes bad odours, cleanses the mouth, mouth fragrant.
- It is useful in extra secretion of saliva which will increase the digestion and removes GIT disorders.
- It is useful when some organic poison gets entered in the stomach by polluted water intake. So it is also important.

- **धूमपान:-**

- It means the procedure of inhaling medicinal smoke.
- It also removes the जत्रूर्ध्व विकार.

- The smoke is inhaled through nostril and let out by mouth.

Role in prevention of pollution:-

- It also plays a major role in prevention of hazards of different types of pollution.
- It removes Headache, Eye and Ear pain, Weakness of teeth, Toothache, Hair falling and graying, Disorder of voice etc.

- **अभ्यङ्ग:-**

- It means oil massage.
- It should be practice daily with तिल तैल.

Role in prevention of pollution:-

- Sleep disturbance is occurring by the Noise pollution so if person do अभ्यङ्ग

daily then the sleep become good.

- It is also useful in skin diseases which are produced by the water pollution when bathed in polluted water, Radioactive pollution and Thermal pollution.
- It also protect from Air pollution.
- It also controls vector borne disease which is produce by pollution because by olieation the mosquito bite is to be controlled.
- So that अभ्यङ्ग should be use daily.

- **शिरॉभ्यङ्ग:-**

- It means oileation to head.

Role in prevention of pollution:-

- It control the hair fall and graying of hairs.
- Prevents the headache.
- Give mental happiness to prevent the personal pollution.
- Sound sleep for prevention of Noise pollution.

- **कर्ण पूरण:-**

Role in prevention of pollution:-

- It is the most important procedure to prevent the Noise pollution.
- By this pollution the Ear disorders occur.
- So daily practice of this prevents the pain of ear, hard hearing and deafness do not occur.

- **<u>पादाभ्यङ्ग:-</u>**

- The oileation in feet should be practice daily.

Role in prevention of pollution:-

- It removes the Dryness, Stiffness, Roughness, Tiredness and Numbness of the feet which is produced by Air pollution (dryness is present in the Air), sometimes Water pollution.

- **<u>उद्वर्तन:-</u>**

- There are 2 types of उद्वर्तन-

उद्घर्षण -massage with powder of herb without oil.

उत्सादन -massage with paste of herbs along with oil.

Role in prevention of pollution:-

- It liquefies the fat and prevents personal pollution.
- It dilates blood vessels and enhances the complexion of skin.
- It is useful in skin disorders like itching, eruption and rashes produced by the radioactive and thermal pollution as well as Air and water pollution.

- **व्यायाम:-**

Role in prevention of pollution:-

- Exercise should be done daily.
- It gives lightness to the body, ability to do work, depletion of excess fat so prevent personal pollution because it also gives the mental pleasure.
- व्यायाम increase the digestive power and prevent the Indigestion, Acidity etc.
- Exercise also prevent the skin diseases produced by different pollution because by doing the exercise sweating increased and sweat means mala which is pass out from our skin.

- **स्नान:-**

Role in prevention of pollution:-

- Bathing is important to prevent skin disorders.
- It enhances the digestive power to prevent GIT disorders.
- It destroys the fatigue, sweat, dirt, gives strength, compactness and cures impurities of body.
- So स्नान also plays a little bit important in prevention of hazards of pollution.

- **<u>अनुलेपन and मुखालेपन:-</u>**

<u>Role in prevention of pollution:-</u>

- Applying the cosmetic powder, paste and oil on face and also all over the body gives strength, removes sweat and bad odour.
- Removes discoloration, Tiredness and patches or eruptions on the skin.
- So it is also helpful in skin disorders.

<u>आहार:-</u>

- आहार also plays an important role in prevention of health hazards of pollution.
- There are some factors like आहार विधि विशेषायतन, आहार विधि विधान etc.

- This 8 rule of आहार is very important for proper digestion of food.

- So everyone should follow this 8 rule of आहार for maintain the health.
- One should start Ahara with मधुर रस then अम्ल, लवण, कटु, तिक्त कषाय. Like this one should take Ahara in a chronological order. And one should take अनुपन as जल. Because this आहार रस gives strength, बला, वर्ण, पुष्टि, धातु पोषण, इन्द्रिय प्रसादन etc.

निद्रा:-

- Sleep is a special state of mind in which the mind is not associated with any type of इन्द्रिय.
- Proper or improper sleep affects on our health.
- If proper sleep is not taken then the person loose his immunity because proper sleep is responsible for attaining immunity.
- In ayurveda also आचार्य चरक explained about effects of निद्रा-

निद्रायत्तंसुखं दु:खं पुष्टि: कार्ष्यबलाबलाम |
वृषताक्लिबता ज्ञानामज्ञानंजीवितं न च ||

-च.सू. २१/३६

❖ Conclusion:-

The दिनचर्या is a vast topic and it is important in our day to day life. We all should follow the rule of दिनचर्या**.** Daily regimen is very beneficial in all aspects like pollution hazards, side effect of cosmetics products and in lifestyle diseases etc.

Here the topic is the role of दिनचर्या in prevention of health hazards of pollution is described. The pollution means the presence of impurities and pollutant substances in the environment, and it is very harmful to all. Now a day the pollution become a major problem in world, and prevention of this pollution is essential.

Many health hazards are occurring to human health as well as animals because of pollution. So with the help of daily regimen we can prevent the health hazards. There are many type of pollution and all are minimize by the दिनचर्या easily. It prevents major diseases like skin disease, sensory organ disease which is produced by water pollution, noise pollution etc.आहार and निद्रा also plays an important role in this. Proper आहार and निद्रा can increase our immunity so that we can protect ourselves from this pollution hazards.

दिनचर्या is very important and it is cheap also so that everyone can follow this rule easily for maintain the good health. So we should follow the rule of the दिनचर्या and take care of ourselves so that the health hazards due to pollution can be controlled.

❖ **RESEARCH PAPERS**:-

(1) International Ayurvedic Medical Journal(IAMJ)

- A STUDY ON THE EFFECT OF DINACHARYA (AYURVEDIC LIFE STYLE) FOR HEALTHY LIVING IN MODERN AGE Hiremath Parameshwar, Kulkarni Pratibha, Kekuda Prashantha, Chiplunkar Shivprasad
- INTRODUCTION: - To maintain the health some activities are mentioned in Ayurveda under the term dinacharya. By following daily regimen (Dinacharya) one will be able to follow a healthy lifestyle thereby maintaining health.
- CONCLUSION: - Just as unhealthy lifestyles are the principal causes of modern-day illnesses, healthy life- styles can result in an improved feeling of wellness that is critical to optimal health. In recognizing the importance of "Years of healthy life," the public health service also recognizes what it calls "Measures of well- being." This well-being or wellness is associated with social, mental, spiritual, and physical functioning. So "Health management is free and enjoyable; But disease management is very costly and painful."

(2)International journal of Ayurvedic and Herbal Medicine

- Role of Dincharya Regimen towards Attaining Positive health
- Author:- Dr. Monika Chaudhary, Dr.Jitender Kumar Rana
- INTRODUCTION:

Ayurveda is the ancient science of life. It is the science which not only deals with the curative aspect of diseases but gives more importance to preventive aspect1 "Prevention is better than cure". Lifestyle refers to someone"s way of living or we can say the dietary (Ahara) and behavioral (Vihara) choices of an individual that he/she usually practices in daily routine of life.

- CONCLUSION:

With the advancement of time, lot of changes has taken place inevitably in the social and religious customs and behavior and also in the mode of lifestyle of people. The dincharya regimen if followed properly helps o attain physical, mental and spiritual well being of an individual.
